

CompositionMeasure for Approximate<MaxDivergence>

Michael Shoemate

This proof resides in “**contrib**” because it has not completed the vetting process.

Proves soundness of the implementation of **CompositionMeasure** for **Approximate<MaxDivergence>** in **mod.rs** at commit **f5bb719** (outdated¹).

Pseudocode

```
1 class CompositionMeasure(ApproximateMaxDivergence):
2     def composability( #
3         self, adaptivity: Adaptivity
4     ) -> Composability:
5         if matches(adaptivity, Adaptivity.FullyAdaptive):
6             raise "fully-adaptive composition is not currently supported for max-divergence"
7         return Composability.Concurrent
8
9     def compose(self, d_mids: Vec[Self_Distance]) -> Self_Distance:
10        eps_g, del_g = 0.0, 0.0
11        for eps_i, del_i in d_mids:
12            eps_g = eps_g.inf_add(eps_i)
13            del_g = del_g.inf_add(del_i)
14        return eps_g, del_g
```

Postcondition

Theorem 1.1. `composability` returns `Ok(out)` if the composition of a vector of privacy parameters `d_mids` is bounded above by `self.compose(d_mids)` under `adaptivity` `adaptivity` and `out-composability`. Otherwise returns an error.

Proof. By the postcondition of **InfAdd** we have that $\sum_i d_mids_i \leq \text{compose}(d_mids)$, where the summation is applied independently to epsilons and deltas, and the comparison applies to both the global epsilon and global delta.

¹See new changes with `git diff f5bb719..a9719a9e rust/src/combinators/sequential_composition/mod.rs`

Adaptivity	Sequential	Concurrent
Non-Adaptive	Theorem 1[DKM ⁺ 06]	Theorem 1.3[VZ23]
Adaptive	Theorem 1[DKM ⁺ 06]	Theorem 1.3[VZ23]
Fully-Adaptive	None	None

This table is reflected in the implementation of `composability` on line 2.
