fn make_privacy_filter

Michael Shoemate

This proof resides in "contrib" because it has not completed the vetting process.

Proves soundness of fn make_privacy_filter.

1 Hoare Triple

Precondition

Compiler-verified

- Argument odometer of type Odometer<DI, MI, MO, Q, A>.
- Argument d_in of type MI_Distance, the associated distance type of MI.
- Argument d_out of type MO_Distance, the associated distance type of MO.
- Generic DI implements Domain.
- Generic MI implements Metric.
- Generic MO implements Measure.
- MI_Distance implements ProductOrd.
- MO_Distance implements ProductOrd.
- (DI, MI) implements MetricSpace.

User-verified

None

Pseudocode

```
def privacy_map(d_in_p: MI_Distance) -> MO_Distance:
14
15
           if d_in_p.total_gt(d_in):
               raise "input distance must not be greater than d_in"
16
17
           return d_out
18
19
      return Measurement.new(
20
           odometer.input_domain,
21
           odometer.input_metric,
           odometer.output_measure,
23
           Function.new_interactive(function),
24
25
           PrivacyMap.new_fallible(privacy_map),
```

Postcondition

For every setting of the input parameters (odometer, d_out, DI, MI, MO, Q, A) to make_privacy_filter such that the given preconditions hold, make_privacy_filter raises an error (at compile time or run time) or returns a valid odometer. A valid odometer has the following properties:

- 1. (Data-independent runtime errors). For every pair of members x and x' in input_domain, invoke(x) and invoke(x') either both return the same error or neither return an error.
- 2. (Valid odometer queryable). For every member x in input_domain, where function(x) does not raise an error, function(x) returns a valid odometer queryable.

Proof of data-independent errors. Function.eval on line 12 has data-independent exceptions, because the function is from odometer, which is a valid odometer. Since this is the only location where an exception can be raised, the data-independent errors property holds.

Proof of privacy guarantee. By the definition of a valid odometer queryable, the output of make_privacy_filter upholds the privacy guarantee.
